

Construction Insights Powered by AI

Access real-time project information by partnering with OxBlue, an industry leader in jobsite intelligence. Our construction camera systems, interface, and time-lapse capabilities make it easy for you to monitor, manage and market your construction projects from anywhere.

Further elevate your builds and business with OxBlue's new artificial intelligence (AI) features that help improve transparency, efficiency and safety throughout your projects. Powered by advanced technology, it's easy to understand your visual data and make real-time decisions regarding jobsite performance.

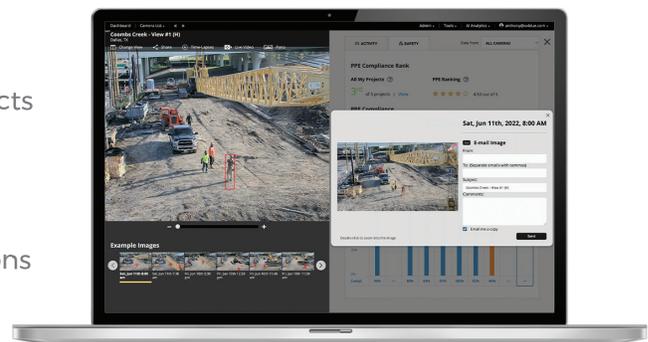

Activity Analysis

- Verify work hours and deliveries
- See the short and long term impact of weather conditions
- Proactively mitigate scope creep to keep projects on schedule
- Identify areas where you can boost performance
- Make decisions based on clear construction data

Safety Tracking

- Identify safety compliance levels across your projects
- Track hard hat and safety vest usage
- See opportunities for additional training
- Determine subcontractor safety levels
- Reduce liability issues and potential policy violations

How it Works

OxBlue's AI powered Analysis features streamline project review cycles so you can quickly understand the most important information about the jobsite and take action as needed. Once enabled, our AI engine and reporting algorithms regularly review project images, analyze activity, movement and safety patterns onsite, and automatically publish performance insights straight to your dashboard in the OxBlue interface.

AI Analysis can be enabled on most OxBlue camera systems. Please contact support@oxblue.com or call 888-849-2583 to start harnessing the power of artificial intelligence on your construction projects.

CONSTRUCTION INSIGHTS POWERED BY AI

Notifications

Act on jobsite priorities quickly. Enable auto-notifications to manage by exception and know instantly when jobsite actions deviate from your expectations.

- Build custom alerts using activity, safety and weather data
- Determine thresholds for when you should be notified
- Automatically share alerts with stakeholders

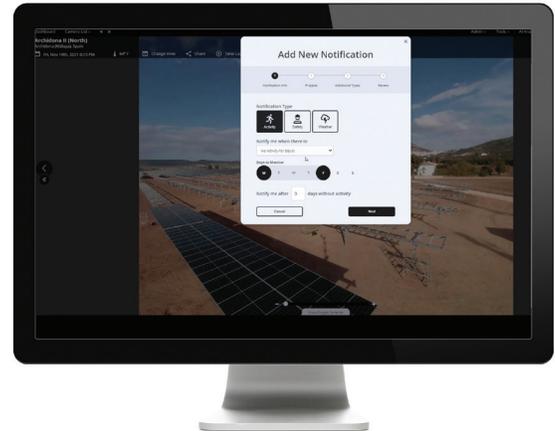

Image Search

Investigate jobsite details by sorting and searching for specific information in seconds. With image search, you can quickly filter through thousands of data points with ease.

- Select search parameters
- Review images that meet your criteria
- Save common queries for future use

Equipment Notification

- Identify equipment arrival, presence and activity
- Track 11 types of construction equipment and personnel on the jobsite:
 - Backhoe Loader
 - Bulldozer
 - Cement truck
 - Dump Truck
 - Dumpster
 - Excavator
 - Ladder
 - Passenger Vehicle
 - Person
 - Scissorlift
 - Semi Trailer
 - Skid Steer Loader
 - Telehandler
 - Wheel Loader
