

New OxBlue Office Reflects Company Values, Gives the Growing Construction Camera Provider Much Needed Room

ATLANTA, November 5, 2015 – The past several years have been a period of strong growth for the award-winning construction webcam service provider, for both its products and its workforce. Coming on the heels of making the 2015 *Constructech* 50 list of the top tech companies whose products and services bring important innovations to the construction industry, OxBlue recently announced it's been awarded *Constructech's* first ever Connected Hardware Award for its construction cameras, which *Constructech* cited as the fastest growing product on the market. OxBlue has also earned Atlanta's Best and Brightest Companies to Work For Award every year since 2012. The upshot? OxBlue has doubled in size – twice – in recent years and continues to recruit.

So early this year work began on OxBlue's new headquarters in midtown Atlanta.

"The new building gives us the room we need to support our growth and the opportunity to design a space that reflects and supports our values. We've put a lot of thought into how to use the space to foster the collaboration and creativity needed to thrive as a company and as people."

Chandler McCormack, OxBlue CEO

OxBlue construction cameras and time-lapse videos are used throughout the construction industry to monitor jobsites, manage projects, and improve communication among stakeholders. The new building reflects OxBlue's connection with its clients, incorporating materials like brick and concrete, metal, exposed plywood, and even scaffolding. It also symbolizes OxBlue's approach to delivering useful, innovative products and services, one that combines traditional values and cutting edge technology. To that end, state-of-the-art technology like LED lighting is used throughout the building.

OxBlue began work on its new headquarters earlier this year to accommodate its continued growth.

Work-life balance is also valued company wide. To avoid increasing commute times, the building is less than a mile from the old one, with restaurants and stores within walking distance.

"Our employees are among our greatest assets, and we want to keep attracting and retaining the very best," adds McCormack. "So it only makes sense to have a workplace they want to be a part of."
