

OxBlue Construction Cameras Win *Constructech's* Connected Hardware Award

ATLANTA, October 8, 2015 – Construction webcam service provider OxBlue has announced that its construction cameras have earned *Constructech* magazine's inaugural Connected Hardware Award. The awards program is designed to recognize devices that provide data on construction projects and save time and money.

Constructech magazine is where construction and technology converge. The publication influences construction professionals to unleash the business value of technology, like software and apps. The new awards program brings into the fold "the next wave" of technology: hardware that facilitates and enhances connectivity on the jobsite.

"OxBlue construction cameras are the epitome of truly connected hardware, offering a turnkey solution to monitor the jobsite. We identified this product as the fastest growing connected hardware on the market."

Peggy Smedley, *Constructech* Editorial Director

OxBlue's construction cameras and time-lapse videos are used by project owners, general contractors, and other construction professionals to document, remotely monitor, and track progress on jobsites across six continents.

Cellular technology built into the construction webcams transmits high-resolution jobsite images to secure servers. Project managers and other stakeholders easily access the images through the construction camera interface and use the Project Dashboard to view, compare, and share detailed jobsite images and high-definition time-lapse videos of any of their projects.

"We're constantly working to make our construction cameras – and all our tools and services – truly valuable to our clients. It's great to be recognized for it," says Chandler McCormack, OxBlue CEO.

Constructech magazine's Connected Hardware Award is designed to recognize devices that provide data on construction projects and save time and money.

Earlier this year OxBlue was recognized for its mobile apps, which enable clients to monitor and manage jobsites using their smartphones and tablets, with a spot on the 2015 *Constructech* 50. The annual list names the top 50 tech companies whose products or services bring important and profitable innovation to the construction industry.

OxBlue camera systems come complete with all hardware, software, cellular data connection, and three kinds of time-lapse movie capabilities. To learn more about OxBlue construction cameras and time-lapse videos, please call (888) 849-2583.

About OxBlue: OxBlue, a leading construction webcam service provider, has been making the jobs of construction professionals and project stakeholders easier since 2001. High-resolution jobsite images, high-definition time-lapse videos, and intuitive technologies connect everyone on the project to the jobsite and with each other for better project management, better communication, and a more efficient build. OxBlue construction cameras are at work across 6 continents and all 50 states, serving Fortune 500 companies and top ENR contractors. For more information, please visit OxBlue.com.
