

OxBlue Releases New iPhone, iPad App for Accessing Its Construction Webcams

ATLANTA, January 29, 2015 – OxBlue, a leading innovator and provider of construction cameras and jobsite-monitoring technologies, released a new app for clients who use iPhones and iPads. The development of the enhanced app is in response to clients' increased use of mobile devices for accessing construction webcams, reviewing archived jobsite images, generating time-lapse movies and communicating with project stakeholders.

OxBlue's latest app was developed for compatibility with iOS 8, the recently released version of Apple's mobile-device operating system, and features:

- Clean, crisp display of high-resolution jobsite images
- Multiple dashboards and social media integration
- More intuitive navigation and greater speed

"Not only are more and more clients using mobile devices to monitor projects, they're using them more frequently," explained OxBlue CTO Bryan Mattern. "Our new app works with the latest iOS and enhances the user experience for clients who are increasingly on the move and depend on their iPhones or iPads to stay on top of projects."

This new app is free to OxBlue clients and is available through the App Store. Earlier this year, the construction webcam service provider also released a new app for Android smartphones and tablets; it is available through Google Play. Both apps enable clients to view jobsites and manage projects when on the go by allowing users to:

- Access multiple construction cameras in real time
- View high-resolution archived images of projects
- Easily locate images from specific dates and times
- View high-definition construction time-lapse movies
- Share jobsite images

OxBlue's new app enhances the user experience with greater speed and more intuitive navigation.

"Our new app works with the latest iOS and enhances the user experience for clients who are increasingly on the move and depend on their iPhones or iPads to stay on top of projects."

Bryan Mattern, CTO of OxBlue

Every OxBlue construction camera system includes all hardware, easy-to-use technologies, cellular data connection, and a professionally produced construction time-lapse movie of the completed project.
